# PLANET Universal Network Management System UNI-NMS

# Universal Network Management System Software (UNI-NMS)

#### Universal Network Management System for Central Management

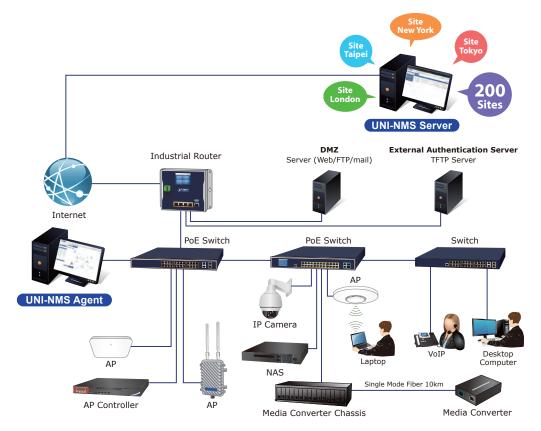

PLANET'S Universal Network Management System (UNI-NMS) incorporated in a workstation or PC can monitor all the deployed wired or wireless industrial-grade network devices, such as managed switches, media converters, routers, smart APs, VoIP phones, IP cameras, etc. compliant with the SNMP Protocol, ONVIF Protocol and PLANET Smart Discovery utility. It thus enables the administrator to centrally manage the network from a central office, greatly boosting network and power management efficiency. With its user authentication management, UNI-NMS enhances data transmission security in the modern factory automation systems.

#### **Economical Central Network Management Solution for SMBs**

PLANET UNI-NMS helps service providers and IT managers control all PLANET network devices at the same time and enables administrators to effectively manage up to 100,000 managed nodes and 200 managed sites simultaneously without purchasing any license, hardware controller and expensive annual subscription fee.

The administrator can automatically discover and configure device profiles, batch provisioning/firmware upgrade, and built-in SAPC (Smart AP Control) that customize Wi-Fi planning against floor maps, and monitor all managed APs through single web-based interface. It allows operating across different platforms through virtualization software. Such design avoids the need to configure the wireless APs one by one and provides more profit to SMB users.

## **Centralized Management Controller**

PLANET NMS-500/NMS-1000V Universal Network Management System incorporated in a workstation or PC can monitor all the deployed wired or wireless PoE industrial-grade network devices, such as managed switches, media converters, routers, smart APs, VoIP phones, IP cameras, etc. compliant with the SNMP Protocol, ONVIF Protocol and PLANET Smart Discovery utility. It thus enables the administrator to centrally manage the network from a central office, greatly boosting network and power management efficiency. With its user authentication management, the NMS-500/NMS-1000V enhances data transmission security in the modern factory automation systems. With the touch panel, the NMS-1000V can conveniently help the administrator check the network status right away. If abnormality is detected, the administrator can solve the problem from the central office, without having to go to the actual site.

# Comprehensive 802.3bt PoE++ Solution for Smart High Power Network

### **High Power Consuming Applications**

# **Power over Ethernet**

#### **Enhanced Power Budget**

PLANET PoE Solution provides full power budget to satisfy the increasing needs for power consumption of powered devices, such as wireless APs, IP phones, and IP cameras. Their IP-based, remote Web management interfaces also provide an effective central power management solution to monitor and control per port power feeding of deployed powered devices. PLANET PoE Solution with high power capability helps realize commercial-grade and industrial-grade network applications.

#### **Intuitive PoE Management via Touch LCD**

PLANET has developed the world's first PoE Managed Switch series with intuitive color touch LCD interface to allow the network management in real time without logging in to the computer, greatly enhancing the management efficiency. The network system, PoE PDs, and even the cable diagnostics can be easily managed through this cutting-edge user-friendly touch LCD panel built in the PoE Switches. Moreover, the Color Touch LCD PoE Switch supplies 10G data transmission capability, high power PoE from IEEE 802.3af/at 30-watt to 60~95-watt ultra power, intelligent PoE functions, and unique ONVIF support to promote the network performance for SMEs, enterprises, public places and industrial hardened environments.

#### **Uniquely Intelligent PoE Management for Power Saving**

In order to support users to conveniently manage the PoE system or end-span devices in the client site, PLANET has developed a unique and user-friendly Intelligent PoE Management function which effectively assists the IT managers in improving the efficiency of management, saving the cost of maintenance, and extending the life of products.

#### PoE Intelligent Temperature Detection and Control function automatically

detects the temperature of the environment and operating product. If the operating product is over normal temperature, this function will be enabled automatically to prevent the product from damage.

The **PoE Power Detection function** improves the working efficiency of IT manager. IT manager can check the total power consumption of all connected devices and power consumption of each connected device. In order to prevent connected devices from damage, this function is automatically enabled.

#### **Extending IP Networking Transmission**

For long distance of IP networking transmission, PLANET integrated wireless and wired technologies, such as Ethernet, fiber and coaxial cables, with Power over Ethernet to deploy reliable IP networking fast and easily in any environments.

#### **Intelligent Powered Device Alive Check**

**Management Functions** 

**Intelligent PoE** 

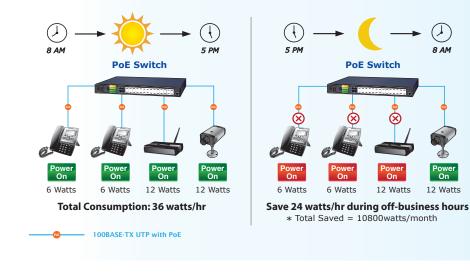

PLANET PoE switches can be configured to monitor connected PD (Powered Device) status in real time via ping action. It will greatly enhance the network reliability through the PoE port resetting the PD's power source and reducing administrator management burden.

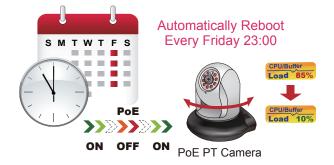

#### **PoE PD Alive Check**

#### **PoE Schedule for Energy Saving**

The "PoE schedule" function helps you to enable or disable PoE power feeding for each PoE port during specified time intervals and it is a powerful function to help SMBs or enterprises save power and money.

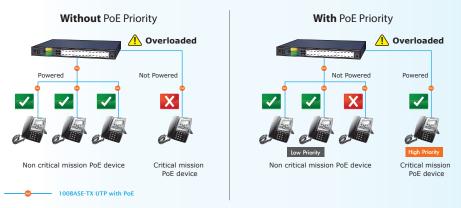

#### **Scheduled Power Recycling**

PLANET PoE switches allow each of the connected PoE IP cameras or PoE wireless access points to reboot at a specific time each week. Therefore, it will reduce the chance of IP camera or AP crash resulting from buffer overflow.

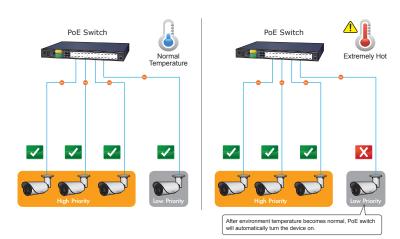

## **PoE Priority for Critical Service**

The PoE power budget can be allocated by priorities or classification and sent alert event logs when power usage reaches the defined threshold.

### **PoE Over Temperature Protection**

The automatic Over Temperature Protection helps to prevent power budget overloading while the temperature rises.

### **PoE Usage Monitoring**

Via the power usage chart in the web management interface, PLANET PoE switches enable the administrator to monitor the status of the power usage of the connected PDs in real time.

### SMTP/SNMP Trap Event Alert

Though most NVR or camera management software offers SMTP email alert function, PLANET POE Switches further provide event alert function to help to diagnose the abnormal device owing to whether or not there is a break of the network connection, loss of POE power or the rebooting response by PD Alive Check process.

## Wireless Antennas and Cable Accessories

To commit the wireless long-distance connectivity, PLANET Wireless LAN Solution also provides a variety of Antennas, Cables and other Accessories for 2.4GHz and 5GHz band applications where more RF gain power is required to increase the convergence of the installations wirelessly.

The antennas include unidirectional antenna and omni-directional antenna to meet the need of different environments. The omni-directional antenna is ideal to install in a central base-station in a point to multi-point wireless application, and unidirectional antennas are designed for long distance.

To keep the wireless device free from lightning induced surges that travel on the coaxial transmission lines, PLANET also provides the arrestor guarding the wireless equipment from damage that could cause your previous network resources to break down.
